What do the symbols mean on mitsubishi air conditioner

February 24, 2020At first glance, the symbols of air conditioners can be quite easy to look at and decipher: most of these come in the form of water and air illustrations to different variations of snowflake icons. Pretty simple? Not quite. Apart from the standard cool mode and dry mode or on and off buttons, figuring out the purpose and function of other less obvious symbols can be a lot confusing. So unless your air conditioner seller or installer took the time to explain the meaning and functions of these symbols, these symbols might as well just be a bunch of dusty hieroglyphics carved into your air conditioning remote or control panel.In this article, we will discuss the different meanings and functions of air conditioner symbols — from the common ones down to the most obscure symbols. Now since there are a lot of air conditioner brands out there, the symbols might vary and thus it's important for you to check which brand your unit falls under.Common Air Conditioning SymbolsLet's start with the most common of all: the on and off symbol. This symbol is usually represented by a vertical bar.Any snowflake symbol belongs to the aircon cool mode. This function is one of the most widely used modes in an air conditioner and remains as a popular choice for instant cooling in the unit.If the symbol appears in the form of a sun, it's for the heat mode. The heat mode operates by blowing warm air into a room until the desired temperature is reached.Not to be confused with the cool mode, the dry mode is usually represented by the symbol of a water drop. Even though it uses a liquid symbol, the dry mode is a function that reduces humidity in a room's air while still blowing cool air. If you don't need power cooling, then the fan mode should work best for you. This feature is usually represented by a fan symbol and enables the built-in fan of the unit to provide the air, although at the expense of lower cooling capacity. This mode is known to reduce power and electricity consumption.The fan speed symbol is commonly displayed in the symbol of signal bars. This helps you indicate the rate that the internal fan speed is currently having. The higher the bars, the faster the fan will operate. The auto function is usually represented by the letter "A" housed inside different arrows. This function is responsible for maintaining the desired temperature once it has been reached by your unit. It also works in both cooling and heating mode.The quiet or silent mode is usually represented by a human signalling silence. Using this mode will ensure that your unit will operate as quietly as possible to give you a better good night's sleep.The vertical air swing is commonly represented by a symbol bearing multiple strokes of air. This allows you to direct your air swing vertically and in three common directions: static, oscillating or automatic.Similar to a vertical air swing symbol, the horizontal counterpart usually displays air strokes albeit in the horizontal setting. Choosing this function allows you to select the horizontal flow of the unit's air.In need of immediate cooling? Try looking for a human figure in your aircon remote or a thunderbolt symbol. The turbo cooling forces your machine to run at its maximum capacity to provide you with powerful cooling between 15 and 30 minutes.Air Conditioner Symbols Per Brand ExplainedApart from the standard and familiar symbols in your air conditioner's remote control, you must be wondering what the other ones are capable of doing. In this section, we will list down some of the more unique and more technical symbols that are found per aircon brand:Mitsubishi Electric SymbolsIf you are a Mitsubishi Electric aircon owner and want the option to purify your air, be on the lookout for the air purification feature. Usually represented by sparkling symbols, this allows the unit to activate air purification through the plasma filter.If you're looking for a whiff of nature, turning on the natural flow function in your unit might help. It imitates a natural breeze by making the unit's air swing in different directions and at varying ventilation speed. This commonly bears the symbol of an air and a tree.The i-See Sensor activates the unit's temperature sensor to determine and control the air direction needed by a room. Try looking for an aircon and spotlight symbol to activate this feature.Daikin Aircon SymbolsIf you're a Daikin aircon owner and happen to see a symbol of an arrow going over a figure's head, then it might be the comfortable air flux symbol. Enabling this function creates a pleasant and ascending air flux in cold mode. Alternatively, it can also give way to a descending air flux in heat mode.The Econo Daikin function is the power saver mode of the unit that allows for a reduced consumption in power and electricity. This is usually illustrated via a descending arrow symbol.Daikin Smart Eye FunctionOnce activated, the smart eye function will detect for any source of movement in a room. If no movement is detected, it will then automatically direct the unit to save energy. To use this feature, try looking for a symbol of a figure with signal rays.Fujitsu General Aircon SymbolsFujitsu General Aircon symbols are commonly self-referential — using text instead of visual representation to illustrate the functions. Such is the case for the weekly programming function: a text symbol that appears when a weekly programming schedule is being done on the unit.The low noise symbol is responsible for switching on and off the quiet mode of a unit that reduces the noise it emits while in use.Once activated, the energy saving feature will reduce the unit's power consumption if a movement isn't detected by the system within 20 minutes. Once any form of human movement is detected, the unit will then restore back to its normal mode.LG Aircon SymbolsIf you want to get rid of dust particles inside your room, then try looking for the Air Ionizer in your aircon unit. With a symbol of a pine tree and negative ions, what this function does is to eliminate bacteria in your air using negative ions.Internal Unit Automatic Cleaning Function Once activated, this feature will enable the unit to keep on running in ventilation mode even after it's been turned off. This cleaning function, which dries the unit from any solid build-up, usually lasts for 30 minutes after turning the machine off.By turning this on, the unit will rise by 1-2°C every 30 minutes in order to bring more comfort to your sleep. This is usually represented in the symbol of a sleeping star.Samsung Aircon SymbolsActivating the Comfort Samsung function will allow the unit to achieve its desired temperature by way of soft cooling or warming. If you're a Samsung aircon owner and want to try this feature out, look for four strokes of air arranged in different directions.Similar to an air ionizer, Samsung's virus doctor feature helps eliminate bacteria and harmful particles by discharging negative ions into the air to capture and kill them. This function's symbol is equally similar to a loading wheel icon.The Samsung night mode allows the unit to run in sleep mode, reducing emitted noise and increasing temperature in gradual increments. To try this function out, just look for a symbol with an "OFF" along with the sun and moon.Maximizing Your Aircon's PerformanceTo maximize the different features of your air conditioning unit, you'll need to be familiar with the unique symbols in the unit and know the difference between one another. Doing this will make you more knowledgeable of the mode and functions that would best suit your temperature or energy preferences at any given time. Apart from that, knowing how to use them well can result in improved aircon efficiency and lifespan, saving you from all sorts of maintenance and repair costs in the long run.But apart from being knowledgeable of these air conditioning essentials, it's also important to know when to get regular maintenance and check-ups for your unit. Is your AC remote not functioning well? Is your AC not blowing cool air? Is your air conditioning unit unable to provide cold air room temperature? These are just some of the problems that air conditioners' might encounter.For quality maintenance and repairs for every major air conditioning brand, contact us at Oasis Aircon Singapore. Our team of highly skilled air con technicians are here to assist you for all your aircon needs. With our honest pricing, we ensure that your home, office, or business will receive the best service, for the best price. Need to change your Mitsubishi Electric air conditioner from cooling to heating or heating to cooling? Here are the remote control symbols for the different operation modes. AUTO Mode If the MODE symbols look different on your remote from those above, please consult the user manual for your specific air conditioning model. Esta entrada también está disponible en: SpanishAir conditioner symbols meaning. There exist in the market a great number of air conditioners brands, either for country of origin (Japanese, Korean, Chinese, American, European, etc.), in every brand depending on kinds according to use (split machines, multisplit, pipes, cassette, floor, etc.), but then they exist series or "qualities" inside every kind of unit (Pro Series, FTK-K Series, ACY-UI-LV Series, H6500, Silver Deco, Akebono PNB, etc.). In short, hundreds and hundreds of versions of every brand, of every type... too many. In this article we are going to try to help you identify every one of air conditioner symbols, of their remotes' and thermostats', given that it is true in many of them the way of working is very intuitive, some of them who like to innovate delight us with icons which seem taken out from Star Trek saga and we know what they mean by trial-and-error. In some occasions, air conditioner symbols look like hieroglyphics more than what they should be: intuitive and simple icons. For it would be impossible to analyze all the brands, kinds and series, we will focus on the most common and used ones in air conditioning market. However, though your air conditioner brand isn't included, it is possible some symbols of other air conditioner are shared with that brand and therefore it can clean up your questions. This happens in many occasions in Chinese brands because many of them are white brand and they are manufactured in the same factory but with different labels and names depending on the client who imports them. Air conditioner symbols Mitsubishi Electric symbols SymbolSymbol meaning Turn on and turn off machine. Cold. Run the machine in cold mode. Heat. Run the machine in heat mode. Dry. This function makes the machine to run in dry mode, it will throw out cold but it will focus on removing room's humidity. Ventilation. The internal unit will activate, it will throw out air but it will be at an ambient temperature. Automatic or maintain temperature. It is used once we have the desired temperature in order to machine keeps that ambient temperature. The machine will use, in order to achieve it, either cold or heat mode. Automatic mode. It appears in some functions like fan speed or air slats direction, in order to machine decides which position it takes in every moment. Internal fan speed symbol. On it it's indicated the speed we want, the more amount of lines more speed and therefore more air flux. Quiet mode (very soundless). This symbols activates quiet mode, which will tell the machine to slow down internal fan speed to minimum (even below slowest speed). Vertical airswing symbol. With this symbol we can see actual air direction slats position. Static position, automatic or oscillating. Horizontal airswing symbol. With this symbol we can see actual air direction slats position. Static position, automatic or oscillating. Powerful. Maximum power during 15 minutes. Neither temperature nor fan speed can't be adjusted. Air purification. It activated air purification by a plasma filter. Natural flow or natural breeze. Mode which imitates a natural breeze by making airswing to oscillate as vertically as horizontally and ventilation speed. i-Save function symbol. It allows to recover a predetermined setting previously recorded. Raise ambient temperature. Lower ambient temperature. i-See Sensor. It activates temperature sensor which controls air direction in order to a more sensitive temperature (higher or lower). Presence sensor. It will turn on or turn off presence sensor in order to reducing power or turning off the machine if it doesn't detect people. SymbolSymbol meaning Cold mode. It switches the unit in refrigerating mode. Heat pump mode. It turns on the unit in heat mode. Dry. Function which removes humidity. It will throw out cold air but it will maximise ambient demidifying. Ventilation function. The unit will run only in ventilation mode, neither cold nor heat. Automatic function. The unit run either in cold or heat mode in order to maintain ambient temperature to the selected temperature. Fan speed. It adjusts fan speed. External unit silent mode. This will work on external unit in order to reduce noise. Vertical airswing. We can select vertical air direction, either stable position or automatic. Powerful. This function will make the machine run at its maximum capability during 20 minutes. After these minutes it will return to its normal function. It can be used either in cold mode or heat mode. Comfortable air flux. This function will create a pleasant ascending air flux in cold mode and a descending one in heat mode similar to a breeze. Silent operation. This function reduces to minimum internal fan speed in order to reduce noise to minimum. Econo Daikin function. If it's activated it will limit electric consumption of the unit. Daikin smart eye function. When it's activated and there aren't any movements in the room, the unit will activate automatically the saving energy function. SymbolSymbol meaning It activates cold mode in our Fujitsu-General air conditioner unit. Heat mode. Activation of heat mode in our Fujitsu air conditioner. Dry function. This option, even working in cold mode, will try to eliminate the most quantity of ambient humidity. Ventilation mode. Our air conditioner will work like a fan without throwing out neither cold nor heat. Automatic mode function. This symbols indicates us the unit is on automatic mode and it will use either cold mode or heat mode to reach assigned temperature. Internal fan speed symbol. It switches on or switches off the internal unit quiet mode, reducing to minimum the noise produced by this. Vertical airswing. We will be able to select air flux direction either vertically, steady or automatic. Ventilation speed in automatic mode. The internal unit will decide itself the best air output and it will run according to the best option. Weekly programming. This symbol will appear when weekly programming is activated in our air conditioner. On/Off programming. It will appear when we have programmed a switching off, a switching on or both of them. The energy saving function activated the presence sensor, which will reduce its power when no one in the room is detected during 20 minutes, returning to its normal state when human presence is detected. SymbolSymbol meaning Cold function. Activation of the cold mode in LG air conditioner. It activates the heat pump mode of LG air conditioner. Dry function of LG air conditioner. Ventilation symbol. Natural air. Automatic mode activation. The unit will try to maintain the ambient temperature using cold and heat functions when necessary. It adjusts internal fan speed. Internal unit quiet mode. It reduces noise to minimum of LG air conditioner. Vertical airswing movement. We can select the air flux direction or leave it in automatic mode. High power function. Once it is activated the unit will run at its maximum capability in order to reach as it can the selected temperature. 30 minutes duration. Horizontal airswing. It gives the chance to direct horizontally air flux. Natural wind function. This function will simulate a small natural breeze. Ambient temperature. By pressing this button we will obtain a reading of the current ambient temperature. Weekly programming. This icon will appear when a weekly schedule is activated. This button activates the plasmater ionizer generating cations (positive ions) and eliminating bacteria and other harmful substances. Internal unit automatic cleaning function. Once it is activated and when unit switches off, this will keep running in ventilation mode during 30 minutes in order to dry the machine. Sleep mode or night mode. When it's activated in cold mode, the selected temperature will rise 1°C every 30 minutes automatically to a maximum of 2°C in order to foster a comfortable sleep. Econo function. It activates the energy saving of a 25% or 50% showing L or LL depending on the saving desired. SymbolSymbol meaning Cold mode. The air conditioner will run by throwing out cold. Heat mode or heat pump. Our air conditioner will throw out heat. Dry mode. The air conditioner will focus on removing ambient humidity by throwing cold. Ventilation mode. Function which stirs the house air but without throwing out neither cold nor heat. Automatic function. The unit will maintain the ambient temperature in the desired temperature by means of cold or heat. It increases or decreases the internal fan speed. Quiet mode. The unit will reduce as much as it can the noise produced in the internal unit. Vertical airswing. We can select the vertical air flux direction or select the automatic mode. Horizontal airswing. We can select the horizontal air flux direction or select the automatic mode. Comfort Samsung function. This fuction will achieve to reach the desired temperature by providing a soft warming or cooling. It activates the Virus Doctor function which will produce anions (negative ions) in order to purify the ambient air. Sleep function or Samsung's night mode. The unit will run in sleep mode and it will reduce its noise and temperature gradually. Single user function. This function will reduce the energetic consumption of the machine. SymbolSymbol meaning It activates the cold function in our air conditioner. Heat pump function. This function will activate the heat function in our Mundoclíma air conditioner. Dry function Mundoclíma icon. The air conditioner unit will run as a dehumidifier. Fan function. The unit will work in ventilation, it won't throw out neither cold nor heat. Automatic function. This function will make the unit to maintain the recorded temperature by using cold mode or heat mode. Low internal fan speed. Medium internal fan speed. High internal fan speed. It activates the internal fan turbo speed, a speed even more powerful than the high one. Vertical airswing. We can select the vertical air flux direction or select the automatic mode. Internal cleaning function. It activates the sleep or night function in order to achieve the best comfort by increasing (cold mode) or decreasing the ambient temperature automatically.
